BUSHES BUSHES BUSHES BUSHES BUSHES

FOR THE FOLLOWING MODELS:

MAKE	MODEL	DESCRIPTION	PART NUMBER
Nissan	Patrol	Rubber Bush	5802
Toyota	Landcruiser	Rubber Bush	5802

The Pedders 5802 rubber bush is a better alternative to urethane.

Suited to Nissan Patrol & Toyota Landcruisers the 5802 provides improved castor setting whilst limiting the amount of dirt ingress into the bush during high articulation off road driving - A common problem with urethane bushes in these applications.

A reduction in wheel shimmy improves drivability and the 5802 also provides higher levels of tractability whilst being easy on the differential housing.

Suited primarily for raised/standard applications the 5802 is an outstanding Pedders product providing better feel and more precise steering response which most serious 4WD owners aspire to.

Original Equipment Vs 5802 results:

Brand	Articulation @ 30kg	Deflection @ 300Kg
5802	18 Degrees	2mm
OE	10 degrees	2mm

The rubber bush provides very good levels of articulation (better than OE) - one of the major requirements of a true off road driver. Over the years the off road market has formed a negative perception of restricted axle articulation due to the fitment of urethane in the leading arms. The Pedders 5802 solves this problem by providing superior articulation whilst maintaining a high deflection rate thus ensuring excellent steering feel and shock absorption.
