Diff - Mounts

Pedders Suspension now offers a comprehensive range of high quality urethane differential mount bushes to suit the aforementioned makes and models. Offered as a direct OE (original equipment) part replacement or, alternatively, as a performance upgrade, Pedders range of urethane differential mounts offer a significant reduction of unwanted differential housing movement under acceleration/deceleration conditions. Pedders urethane differential mount bushes have been specifically designed for optimal performance, function and longevity.

Diff - Mount Inserts

Pedders urethane differential mount inserts provide an increased level of control over differential housing movement during acceleration and deceleration. Designed to bolster the existing OE differential supports, the Pedders urethane inserts fit snugly within the recesses of the original OE mounts and provide an increased resistance to differential housing deflection under acceleration/deceleration conditions. Easily installed, Pedders urethane mount inserts are the perfect complement to the factory differential supports.
