Load Carrying & Towing with Leaf Springs

Leaf Spring Resetting

Although we have a large range of new applications there are still many cases that leaf springs require re-setting. Every Pedders store has the ability to do this for you in a relatively short period of time. **Simply contact your local Pedders Outlet for further information regarding Leaf Spring Resetting.**

Leaf Spring Packs

Pedders Suspension has a variety of replacement leaf spring packs for a wide range of 4WD & 2WD vehicles designed specifically for load carrying applications. Pedders replacement leaf spring packs are durable whilst providing improved vehicle control and stability due to the fact that they feature redesigned spring rates.

A number of these packs have a 2 stage design which provides a comfortable ride when un-laden whilst on the other hand provide the performance required when load is applied.

For heavy load carrying and towing, leaf springs remain the best performing suspension design, but can become harsh, noisier and less effective in damping bumps and vibrations. They are also prone to sagging and should be re-set or replaced when a change in ride height or ride quality is observed. Pedders offer full replacement Trak Ryder leaf spring packs that feature inter-leaf friction pads and metal eye sleeves to minimise binding or noise. They are constructed from only the highest grade steels for the most durable performance. As an alternative to total replacement of leaf spring packs, Pedders offers a leaf spring resetting service that involves inserting a new higher rated leaf into the spring pack which is then re-cambered to the desired ride height.
