## Shock Absorber, Steering and Suspension Specialists

### Pedders Suspension Heavy Duty Coils for Load Carrying & Towing

Pedders heavy duty replacement coil springs improve the load carrying ability while maintaining high levels of comfort and control. We offer a range of EXTRA HEAVY DUTY replacement coils for the heaviest loads and "raised" height coils for extra ground clearance, or to compensate for permanent extra loads such as LPG tanks, long range fuel tanks, extra spare wheel carriers, bull bars, winches and storage systems.

### For Example:

Pedders Suspension has a full set of raised height country pack coils for those VE Commodores that need just little extra ground clearance for country driving. With a towbar fitted to a caravan along with a caravan/boat or trailer the rear vehicle will squat noticeably. The Pedders Suspension 7955 heavy duty towing coils are specifically designed to enhance the vehicles load carrying characteristics. They are also particularly suitable for reps who are often carrying loads by trailer or in the boot of the vehicle. **Please see our catalogue section of our website for further make and model listings of Pedders heavy duty coils.**
